FOR IMMEDIATE RELEASE

Dear Sir,

More Significant Drill Results from Haoma's Bulletin Prospect, Pilbara WA (M45/480)

Assay results for a further five holes (BRC15, 16, 17, 21 and 23) drilled at Haoma's Bulletin Prospect (located 4km from the Bamboo Creek Plant) have returned further high-grade gold intersections and have extended the strike length of the mineralized zone to 220m with the zone remaining open at both ends and at depth.

Holes BRC15, 16, 17 and 23 were drilled at the eastern end of the zone. Holes BRC15 and BRC23 intersected several high-grade gold intervals. Further intervals of lower-grade mineralisation were also intersected in BRC16 and BRC17. Hole BRC23 remains incomplete because drilling has been suspended due to wet conditions. More significant results include:

- BRC15 intersected 6m @ 5.41 g/t Au from 18 to 24m,
2m @ 18.32 g/t Au from 36 to 38m, and
2m @ 16.85 g/t Au from 52 to 54m.
- BRC23 intersected 6m @ 6.04 g/t Au from 38 to 44m
- BRC16 intersected 22m @ 1.40 g/t Au from 32 to 54m.
- BRC17 intersected 8m @ 1.62 g/t Au from 58 to 66m.

Hole BRC21 was drilled on the western end of the Bulletin Prospect on the same section as hole BRC22, which intersected 2m at 22.34 g/t Au. The most significant result being:

- BRC 21 intersected 4m @ 29.23 g/t Au from 86 to 90m.

The new intersections are shown in bold in the attached table.

Further results will be released as they come to hand.

For further information, please contact Jim Wallace on (03) 9224 5142.

Yours sincerely,

Gary C. Morgan
CHAIRMAN

Results in bold obtained since release of Feb. 10, 2004 Special Report.						BRC23 is an incomplete hole (due to wet weather), to-date only 62 of the 180 metres have been drilled.			
* Indicates this hole is to be re-drilled to a depth of 120 metres.						BRC17 intersected old mine workings between 24 – 26 metres, no sample recovered for this section.
