FOR IMMEDIATE RELEASE

Dear Sir,

Significant Gold Discovery at Haoma's Bamboo Creek "Bulletin Prospect", Pilbara WA (M45/480)

In Haoma's Activities Report For The Quarter Ended December 31, 2003 released February 2, 2004, Haoma announced that shallow mineralisation has been delineated by RAB and RC drilling over a strike length of 130m at the Bamboo Creek "Bulletin Prospect", 4km from the Bamboo Creek Plant.

Since this announcement, further high-grade gold intersections have been returned within this zone, some over significant drill widths. These assays have been determined by Aqua Regia at the Bamboo Creek laboratory.

- BRC18 intersected 16m @ 5.4 g/t Au from 38 to 54m and
8m @ 9.7 g/t Au from 90 to 98m;
- BRC19 intersected 8m @ 5.2 g/t Au from 32 to 40m.
- BRC20 intersected 6m @ 12.1 g/t Au from 22 to 28m.
- BRC22 intersected 2m @ 22.34 g/t Au from 34 to 36m.

Hole BRC14, which was drilled vertically within the steeply dipping ore zone, intersected 26m @ 15.7 g/t Au from 70 to 96m along with several other narrower high-grade intervals within the hole.

At this point, high-grade intersections have been returned within a zone in excess of 160m long and up to 60m wide. The mineralisation remains open both to the east and west and at depth.

Bulk sample tests on Bulletin ore through the Bamboo Creek plant have achieved full recovery of the gold processed.

The attached table includes all results to date with the new intersections shown in bold. The hole positions are shown in Figure 1.

For further information, please contact Jim Wallace on (03) 9224 5142.

Yours sincerely,

Gary C. Morgan
CHAIRMAN
