Haoma Mining Shareholder Update

Update on Haoma Share Trading Halt

On February 24, 2026, Haoma shares were placed in a ‘trading halt’ with Primary Markets.

Shareholders were advised that the ‘trading halt’ would be lifted when recent test-work on Bamboo Creek Tailings at Haoma’s Bamboo Creek Laboratory and Pilot Plant is completed.

Test-work to date has produced Concentrates reading by XRF, in total, 7%-10% precious metals (gold, silver and PGM).

Plant equipment is now being installed at Bamboo Creek so refining of these Concentrate samples using the Elazac Process will soon be conducted.

The current ‘trading halt’ will be lifted when refining test-work is completed and Haoma shareholders have been advised of all results.

Yours sincerely

Gary C. Morgan,
Chairman
